COMMENTS:

This is a compiled list from various trip lists made by Tom Virzi and Kristen Faust (contact: tom.virzi@gmail.com) between 2012-2014 while staying at Alla Casetta. The cumulative list in the first column (*Specie Totali*) includes all species seen in the general vicinity of Alla Casetta (generally within approximately 20 km). Species seen on the property at Alla Casetta are indicated in the second column (this includes the grounds directly around the B&B, the farms at top of the road leading to the property, and the loop trail that starts at the power station across the river). The last column (*Montagne*) includes species seen on trips to nearby alpine regions (including Monte San Mauro, alpine areas in Val Canzoi, and some other areas in the central Dolomiti). In total, we have seen 73 species at Alla Casetta, another 21 species on trips to alpine regions, and an additional 24 species in other nearby areas. Species reported in the cumulative list that are not included in the Alla Casetta or Montagne lists were seen in nearby areas such as Feltre and Busche; most of these species can be found by birding at the Piave River in Busche (especially waterbirds).

CODES:

C = common species seen regularly (in the proper habitat during the appropriate season)

O = species seen occasionally but not regularly

R = species seen rarely (sometimes only once)
